New book on Roy Chapman Andrews by former Peace Corps volunteer.

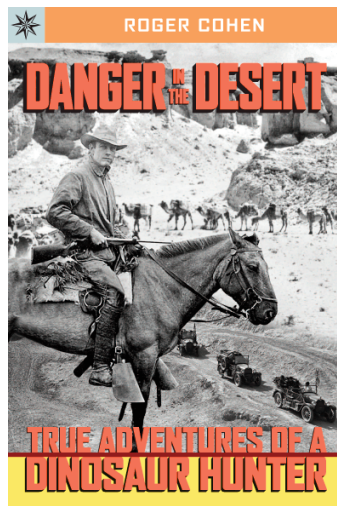

Was Andrews a real-life model for the fictional daredevil Indiana Jones?

Roy Chapman Andrews looked for adventure and found it while leading scientific expeditions for the American Museum of Natural History.

From 1910 to 1930, Andrews led countless expeditions for the American Museum of Natural History, boldly facing such dangers as killer pythons, man-eating wild dogs, marauding bandits and blinding sandstorms. In the Gobi desert he discovered the first dinosaur eggs and the largest deposits of dinosaur fossils ever seen. Scientists are still working in the rich sites he found.

Young readers will be captivated by this faced-paced book filled with photographs and written by a young author who is also attracted to a life of adventure.

Author Roger Cohen was a Peace Corps volunteer in Mongolia and is comfortable riding camels and speaking Mongolian to desert nomads, some of whom still tell tales about the adventures of Roy Chapman Andrews.
